

CLAIMS

1. A washing container for a dishwashing machine, which container comprises several assembled parts, characterised in that a base frame (1) is provided, in which or around which at least one cover part (5), comprising side parts connected to each other at an angle, may be introduced or attached.
2. The washing container as claimed in Claim 1, characterised in that the cover part (5) comprises three side parts (6) connected to one another in a U-shape.
3. The washing container as claimed in Claim 1 or 2, characterised in that is provided on the base frame (1) another side part (8), completing the side part (6) missing on the U-shaped cover part (5).
4. The washing container as claimed in Claim 3, characterised in that the base frame (1) is designed monobloc and the other side part (8) is formed on the base frame (1).
5. The washing container as claimed in Claim 1, characterised in that the cover part (5) is designed as a peripherally closed rectangle.
6. The washing container as claimed in Claim 5, characterised in that the rectangular cover part (5) is formed from two L-shaped side part units.
7. The washing container as claimed in Claim 3 or 4, characterised in that the other side part (8) is fitted with additional functional elements, such

as receptacles for rinsing and/or cleaning agents or a device for water softening.

8. The washing container as claimed in any one of the preceding claims, characterised in that the base frame (1) is provided with a floor part (2) designed as filter.
9. The washing container as claimed in any one of the preceding claims, characterised in that a heat exchanger is integrated in at least one side part (6).
